Safe and secure Telematics Support

In the current economic climate you need partners you can rely on. Your telematics solution is a vital tool in managing your fleet and keeping your costs under control. Savant has an enviable track record in providing long term support of critical systems including telematics. With over 25 years in the IT industry we're the driving force behind many systems - from keeping the nation's blood supplies flowing, to managing incidents of graffiti and vandalism in our town centres.

Savant's staff have many years of experience in commissioning and supporting a wide range of telematics solutions in different transport industries. This includes High Consequence and PET Regulated transport.

Recent client BDS Fuels immediately saw benefits from working with Savant. Mike Smith the owner said "We are extremely pleased with the vehicle tracking system provided by Savant, the installation and commissioning went very smoothly". So pleased were BDS that they have now bought more units to track plant items on site.

Customer feedback shows that Savant's after sale support is excellent and this is borne out by the number of long-term client partnerships we have built.

Please feel free to contact our Telematics Manager, **Denise Jahromi** on 01524 784460 or via denise.jahromi@savant.co.uk with any Telematics support issues. We will contact you in the next few weeks to talk further about our services.

Read more about our Telematics offering [on our web site](#) and read the BDS case study [here](#).
