

STARTS

Savant Limited chosen as software partner by GSS Avionics

Savant's team enable GSS Avionics' business growth

Savant Limited, a leading UK software solutions provider is now a strategic partner of GSS Avionics, a global supplier of Databus Analysis and Testing Solutions.

GSS Avionics selected Savant to provide end-user support, software maintenance and enhancement services for its GSS100 application suite. Savant will provide a UK based development and support team to work with GSS' clients and resellers as well as resourcing GSS' software development projects.

Dave Taylor, Managing Director at GSS Avionics, said "Savant's ability to provide an ongoing supply of technical resources and their breadth of software development expertise gives us the ability to quickly grow our business and introduce new technology to the market."

Glyn Jones, Business Development Manager at Savant Limited stated "We are delighted to be working with GSS Avionics as the partner trusted with critical aspects of their business. The experience and expertise now available to GSS from Savant will help them realise their business development goals."

Savant's resources will work closely with GSS on their plans to enhance current functionality and build new modules for future releases of their software solution. Savant will become GSS' development and support organisation collaborating on the creation of strategic product enhancements and the development and testing of the code.

ENDS

Editor's Notes

Savant Limited has been implementing innovative IT solutions for over 25 years. It is the driving force behind many systems - from keeping the nation's blood supplies flowing, to managing incidents of graffiti and vandalism in our town centres.

See www.savant.co.uk.

GSS Avionics Ltd provides databus analyser systems to the aerospace industry. They have over 20 years of experience in designing their own electrical and optical databus interface hardware. Over the last ten years they have complemented their hardware range by developing a modular graphical software workbench plus a suite of visualisation tools to enable engineers to simulate, monitor and stimulate multiple avionics databuses.
